

DENTAL IMPLANT FACT SHEET

What are Dental Implants?

A dental implant is an artificial root that can be used to support one or more teeth. Implants are the most progressive and natural option in single and multiple tooth replacement. If you are missing a single tooth or many teeth, dental implants may be the perfect solution for you. Dental implants can replace teeth that have been missing since birth and those that have been lost due to gum disease, infection, trauma, or decay. State-of-the-art technology allows implants to provide predictable, comfortable, and esthetically pleasing results while remaining independent of neighboring teeth.

Dental Implants:

Are the most advanced tooth replacement system ever devised.

Are placed and restored comfortably in the doctor's office.

Look and function like natural teeth.

Improve comfort, confidence, appearance, and speech.

Allow you to eat the foods you love and talk, smile, and laugh with confidence.

Help to strengthen and preserve the jawbone preventing the appearance of premature aging.

Represent a conservative treatment option - adjacent teeth are left untouched.

Success rates exceed 95%.

Never develop decay.

Never require root canals.

Are not sensitive to temperature changes.

Can provide great stability for a removable denture.

Can completely eliminate the need for a denture.

Give patients teeth that can last a lifetime.

To evaluate yourself for implants, ask the following questions:

Are you missing one or more of your natural teeth?

Do you have a complete or partial denture that is no longer completely comfortable?

Have you ever been embarrassed by a denture, partial, or a bridge?

Who is a good candidate?

Candidates for implants need enough bone to provide support to the implants and withstand chewing forces. Patients must be healthy enough to provide good healing in the areas the implants will be placed. Please reserve an appointment with us to find out if you are a candidate for dental implants.

Experience, Quality, Precision, and Comfort...

Many patients who have undergone implant procedures comment that dental implants have significantly improved the quality of their lives. Because dental implants help distribute chewing forces through the jawbone, they restore the chewing power lost with missing teeth and promote comfort and confidence in eating. Patients must no longer feel self-conscious about their smiles nor live with uncomfortable dentures or missing teeth. Dental implants, among the latest advancements in dentistry, are the most attractive and comfortable substitutes for natural teeth..

We take pride in our efforts to stay on the cutting edge of dental technology. Our dedication to continuing education, teaching and research, in addition to our clinical experience sets us apart in the field of implant dentistry.

If you have any questions about dental implants or would like to set up a complementary implant consultation, call us at 847-446-5868. Please extend this offer to friends and family. As always, your referrals are welcome and appreciated; your support helps us continue providing state-of-the-art dental care.

Sincerely,

Kenneth N. Milin, D.D. S.
Ann Marie Maggio, D.D.S.
